

LIAM HULSEY

Software Developer

liamchulsey@gmail.com | (816) 510-5183 | Shawnee, KS | GitHub | LinkedIn | Portfolio

SUMMARY

Full-stack software developer with a support-engineering background, specializing in system integration, automation, and data pipeline design across enterprise ERP, EDI, and project-management platforms. Builds and ships production SQL, C#/.NET, and Angular/TypeScript solutions that cut manual processing and stabilize high-volume operational systems.

TECHNICAL SKILLS

Languages & Frameworks: C#/.NET, Angular, TypeScript, JavaScript, Python, React, SQL (T-SQL), PowerShell

Data & Integration: SQL Server, SSRS, REST API design & integration, EDI, Bizweaver, MongoDB

Cloud & Platforms: Azure Functions, AWS (Cloud Practitioner certified), SAP Business One (Service Layer), Git, Postman

EXPERIENCE

Software Developer | Design Resources Inc. | Overland Park, KS

Mar 2026 – Present

- Architected PowerShell automation connecting SAP Business One, Wrike, and EDI platforms, eliminating manual cross-system reconciliation and closing a recurring source of order-processing errors on Nike Promo/DPOM workflows.
- Designed and indexed SQL Server stored procedures powering ETL-style data transformation across SAP B1, EDI, and Wrike, reducing query run time and stabilizing daily reporting pipelines.
- Built and deployed a SQL Server validation procedure automating the customer copy-art approval workflow; tested against production order data (100+ orders, 1,000+ line items) using a rollback-safe transactional harness before go-live.
- Developed REST API integration scripts in PowerShell and JavaScript across three vendor platforms, cutting API call volume through batching and reducing downstream rate-limit failures.
- Engineered webhook-driven task automation (PowerShell, C#) for assignee sync and workflow-transition logic in the company's enterprise project-management system, removing a recurring manual handoff for the operations team.
- Maintained and extended full-stack Angular/TypeScript and C#/ASP.NET applications, shipping fixes and features across frontend and backend layers on a biweekly release cycle.

Application Support Analyst | Design Resources Inc. | Overland Park, KS

Apr 2025 – Mar 2026

- Supported enterprise data platforms with a focus on integration stability, diagnosing recurring failures across SAP B1, EDI, and third-party APIs before they reached production.
- Built PowerShell diagnostic utilities to capture logs and surface failure patterns, cutting the time to root-cause integration issues and accelerating handoff to engineering.
- Partnered with internal teams and external vendors to resolve performance issues, laying the groundwork for the promotion to Software Developer.

Product Support Analyst | Flint Hills Resources | Wichita, KS

Mar 2024 – Mar 2025

- Troubleshoot complex data systems and integrations supporting high-volume operational pipelines, maintaining reliability and uptime for business-critical processes.
- Identified and corrected upstream/downstream data mismatches, stabilizing recurring pipeline failures and reducing repeat incidents.

Tier I Support Engineer | ChannelMix | Kansas City, MO

May 2023 – Jan 2024

- Served as first point of contact for client issues across data and reporting platforms, resolving tickets under SLA.
- Classified and triaged incoming issues via log analysis, routing complex API and data failures to engineering with complete diagnostic context to speed resolution.

EDUCATION & CERTIFICATIONS

BS, Business Administration – Information Systems — Louisiana State University of Alexandria, 2023

Full Stack Web Development Certificate — Kansas University, 2023

AWS Certified Cloud Practitioner — Amazon Web Services, 2024

VOLUNTEER EXPERIENCE

Juvenile Diabetes Research Foundation — Volunteer – 2005 – Present

Breakthrough T1D — Chair (Youth Leadership Committee) – 2026 – Present
